Please read this operating manual carefully before starting up.

## Observe the installation and connecting instructions.

## Disclaimer of liability:

We have checked the contents of the document for conformity with the hardware and software described. Nevertheless, we are unable to preclude the possibility of deviations so that we are unable to assume warranty for full compliance.

## Type Code

It is not permitted to connect the grounds of the sensor- and process-output with each other.

| OUT1 $\boldsymbol{=}$ Relay | Switches on setpoint SP1 |
| :--- | :--- |
| OUT2 $\boldsymbol{=}$ Relay | Switches on setpoint SP2 |
| OUT3 $\boldsymbol{=}$ Relay | Switches on setpoint SP3 |
| OUT4 $=$ | Analogue process value output 0/4...20mA. |
| Function of contact k1: | k1: open =Adjustment lock only via "Software Code" <br> k1: closed = Adjustment locked (according to the chosen software code) |

## Technical Data

| Input Thermocouple: | Built-in internal compensation point and protection against sensor breakage and incorrect polarity. <br> Re-calibration not required for a line resistance of up to 50 Ohms. <br> Calibration accuracy: $\leq 0,25 \%$ |
| :---: | :---: |
| Input Pt100 / RTD: | 2 or 3-wire connection possible. |
|  | Built-in protection against sensor breakage and short circuit. |
|  | Max. permissible line resistance by 3-wire connection: 80 Ohms |
|  | Sensor current: $\leq 0,5 \mathrm{~mA}$ |
|  | Calibration accuracy: $\leq 0,2 \%$ |
| Input 0/4...20mA: | Load max. 10 Ohm. |
| Linear error:$\leq 0,2 \%$ |  |
|  |  |
| Setpoint selection (k1): | Ext. potential-free contact, switching voltage appr. 24 V DC, max. 1 mA . Selection between SP1 (main setpoint) and SP2. |
| Control outputs: | - Relay (UR appr.), max. 250 VAC, max. 3 A (cos-phi = 1) |
| Process output: -OUT 4: | Equivalent to the choosen range. |
|  | 0/4... 20 mA Load max. 500 Ohms |
|  | Linearity: $\leq 1,5 \%$ Delay time: app. 2 secs. |
| 7-Segment-Display: | Process: 10 mm red, Set: 10 mm red |
| Data protection: | EAROM |
| CE-Mark | Tested according to 2004/108/EC Electr. safety EN 61010-1 <br> EMC for industrial areas EN 61326-1 |
| Power supply: | Standard: 230 V AC. $\pm 10 \%, 48 \ldots 62 \mathrm{~Hz}$. Others possible. See Type Code. Appr. 5VA. |
| Connections: | Screw terminals (UR appr.). <br> Protection mode IP 20 (DIN 40050), Insulation class C. |
| Permissible operating con | ions: Operating temperature: 0... $50{ }^{\circ} \mathrm{C} / 32 \ldots 122 \mathrm{~F}$ |
|  | Storage temperature: -30..70 $¢ /-22 \ldots 158$ ¢ |
|  | Climate class: KWF DIN 40040; |
|  | Equivalent to annual average max. $75 \%$ rel. humidity. |
|  | No condensation. |
| Casing: | Format: $\quad 96 \times 48 \mathrm{~mm}$ (DIN 43700). Installation depth 122 mm |
|  | Panel cutout: $92+0,8 \mathrm{~mm} \times 45+0,6 \mathrm{~mm}$ |
|  | Material: Noryl, self-extinguishing, non-drip, UL 94-V1 |
|  | Protection mode: IP 20 (DIN 40050), IP 50 front side |
| Weight: | app. 380 g |

[^0]

$\begin{array}{ll}\text { Display } & \text { PROCESS } \\ \text { Display } 2 & \text { : Process Value } \\ \text { : While standard operation: Selected physical unit or no display }\end{array}$
LED 1: Output OUT1
LED 2: Output OUT2
LED 3: Output OUT3

Parameter key

Adjustment of chosen parameter (e.g. setpoint) to higher or lower values.
E.g. setpoin adjustment.

Short operation: single-step adjustment
Longer operation: quick-scanning
When the parameter adjustments have been altered but not entered with the E-key, the display will flash bright/dark.

E
Confirmation and storage of the pre-selected values
The display will shortly show a light chain as a control of this function.
To return to the process-display: press „E" appr. 2 sec..
$\mathbf{P}$
Sets the parameter back to the originally stored value.
Any alterations made to the parameters, that are not confirmed (E-key) within 30 seconds, will not be accepted and the parameter will return to the process value display.

## Operating Levels

The operation of the controller is divided into 2 levels.
Two seconds after switching on the unit, the controller will automatically be in the operating level.

## Operating level

Process- and setpoint value will be displayed simultaneously.
Within the operating level the setpoints and the alarm value can be adjusted by pressing the " $\qquad$ " / " $\xrightarrow{\sim}$ - keys.

Every adjustment has to be quit by pressing the „E " - key.
All parameters within the operating level can , in succession, be displayed by pressing the „ $\mathbf{P}$ " - key and adjusted by pressing the "

## Configuration level

Enter this level by pressing the „ $\mathbf{P}$ " and „ $\mathbf{E}$ "-key appr. 3 sec. simultaneously.
In the configuration level the sensor type, the sensor range, the switching behaviour of the relay outputs OUT1 - OUT3 can be pre-selected.

This primary information has to be entered before taking the instrument into operation.
The display of each single parameter within the configuration level, and their adjustment, are made in the same way as within the operating level.
After either pressing the „E" - key for approx. 3 second, or waiting for a period of approx. 30 seconds, the unit will automatically return to the operating level (display of process value).

| Display | Parameter | Display |
| :--- | :--- | :--- |
| "Process" |  |  |

Sen Sensor selection

| P1 ${ }^{\circ}$ | Pt 100, | $-50,0 . .100,0^{\circ}$ |
| :---: | :---: | :---: |
| P1 ${ }^{\text {F }}$ | Pt 100, | -58,0...212,0¢ |
| P2 ${ }^{\circ}$ | Pt 100, | -100...200 C |
| P2 ${ }^{\text {F }}$ | Pt 100, | -148... 392 |
| P4 ${ }^{\circ}$ | Pt 100, | 0... 400 |
| P4 9 | Pt 100, | 32... 752 ¢ |
| P8 ${ }^{\circ} \mathrm{C}$ | Pt 100, | 0... $800{ }^{\circ}$ |
| P8 F | Pt 100, | 32... 1472 ¢ |
| L4 ${ }^{\circ}$ | T/C Fe-CuNi (L), | 0... 400 © |
| L4 9 | T/C Fe-CuNi (L), | 32... 752 ¢ |
| L8 ${ }^{\circ}$ | T/C Fe-CuNi (L), | 0...800 © |
| L8 ${ }^{\circ}$ | T/C Fe-CuNi (L), | 32... 1472 ¢ |
| J8 ${ }^{\circ}$ | T/C Fe-CuNi (J), | 0... $800{ }^{\circ}$ |
| J8 ${ }^{\circ}$ | T/C Fe-CuNi (J), | 32... 1472 ¢ |
| $\mathrm{n} 1{ }^{\circ}$ | T/C NiCr-Ni (K), | $0 . .1200{ }^{\circ}$ |
| n1 ${ }^{\text {F }}$ | T/C NiCr-Ni (K), | 32... 2192 ¢ |
| S $1^{\circ} \mathrm{C}$ | T/C Pt10Rh-Pt (S), | 0... 1600 C |
| S1 F | T/C Pt10Rh-Pt (S), | 32... 2912 ¢ |
| 0-20 | Current-Input | $0 . . .20 \mathrm{~mA}$ |
| 4-20 | Current-Input | $4 . . .20 \mathrm{~mA}$ |

If the Sensor selection is changed, the following parameters will be reset
(setting in brackets)
and need to be re-adjusted:
All Setpoints (set to OFF); all switching hysteresis values (Sh);
process offset value (OFF)

The following parameters are only valid for standard signal inputs ( $0 . . .20 \mathrm{~mA}, 4 . .20 \mathrm{~mA}$ ). The difference between the bottom end of the display range and the top end must amount to a minimum of 100 units and a maximum of 2000 units. By adjustment of one of the above parameters, the other in this case will automatically follow.

| rA.SP | decimal points | $0 ; 1 ; 2$ | (ex works: 1 ) |
| :--- | :--- | :--- | :--- |
| rA.Hi | display range top end | rA.Lo ... 9999 | (ex works: 100,0) |
| rA.Lo | display range bottom end | $-1999 \ldots$ rA.Hi | (ex works: 0,0) |

Out4 Process value output

OFF
Pr. 0
Pr. 4
process value output selected
$0 . . .20 \mathrm{~mA}$ process value output
$4 \ldots . .20 \mathrm{~mA}$ process value output

Option: process value output
Sc.Hi higher range limitation (20mA value)

Sc.Lo lower range limitation
( $0 / 4 \mathrm{~mA}$ value)
The difference between
valid for analogue process value output, if Out $4=$ Pr. 0 or Pr. 4
Adjustment range: Sc.Lo ... top range
(ex works: 400)
valid for analogue process value output, if Out $4=$ Pr. 0 or Pr. 4
Adjustment range: bottom range ... Sc. Hi (ex works: 0)
The difference between Sc.Lo and Sc. Hi must be a minimum of $25 \%$ of the sensor range.
unit selectable physical unit shown in the lower display 2
( e.g. : ${ }^{\circ}$, ${ }^{\circ}$, bar, volt, A, OHM, rot, rPM, MA, \%, SEC, HZ ... )
Display Parameter Display

Configuration of the switching behaviour of the relais OUT1, OUT2, OUT3 corresponding to the setpoints SP1, SP2, SP3.

The relais are switching like limit contacts.

on: Relay "activated"
off: Relay "not active"

## Please note:

In case of sensor error the alarms will react in the same way as range override.

| C.SP1 | Configuration setpoint SP1 | 2 | Switching behaviour of relay 1: off - on <br> Switching behaviour of relay 1: on - off |
| :--- | :--- | :--- | :--- |
|  | 5 |  |  |
| C.SP2 | Configuration setpoint SP2 | 2 | Switching behaviour of relay 2: off - on |
|  |  | 5 | Switching behaviour of relay 2: on - off |
| C.SP3 | Configuration setpoint SP3 | 2 | Switching behaviour of relay 3: off - on |
|  |  | 5 | Switching behaviour of relay 3: on - off |

Display Parameter Display
"Process" 2
1 Sh switch-point hystereses OUT 1

Adjustment range: $10 \%$ of the selected measuring range. With or without decimal point, depending to the selected range.

2 Sh switch-point hystereses OUT 2

3 Sh switch-point hystereses OUT 3

Adjustment range: 10\% of the selected measuring range. With or without decimal point, depending to the selected range.

Adjustment range: 10\% of the selected measuring range. With or without decimal point, depending to the selected range.

OFSt process value offset
-999 ... OFF ... 1000 K (ex works: OFF)
-99,9 ... OFF ... 100,0 K
-9,99 ... OFF ... 10,00 K
This parameter serves to correct the input signal, e.g. for:

- $\quad$ the correction of a gradient between the measuring point and the sensor tip,
- the line resistance balancing of 2-line RTD (Pt100) sensors and
- correction of the control devition when using P- or PD-action.

If for example the offset value is set to $+5^{\circ} \mathrm{C}$, th en the real temperature measured by the sensor (when process is balanced) is $5^{\circ} \mathrm{C}$ less than the setpoint and the displayed process value.

LOC
Adjustment lock
OFF no adjustment lock (ex works)
P C parameter and configuration levels locked
ALL all parameters locked
All parameters that have been locked with „LOC"
can be selected and read, but not altered.
This adjustment cannot be changed if the external contact K2 is closed.

1200
EL.xx
No function. End of configuration level

| Display <br> "Process" | Display <br> 2 | arameter |
| :--- | :--- | :--- |
| Process <br> (process) |  |  |
|  |  | physical unit <br> (display 2) |
| SP1 Setpoint 1 | Limit contact value OUT1 |  |
| SP2 Setpoint 2 | OFF $=$ OUT1 not active <br> Limit contact value OUT2 <br> OFF $=$ OUT2 not active | (ex works: OFF) |
| SP3 Setpoint 3 | Limit contact value OUT3 | (ex works: OFF) |
|  |  | OFF = OUT3 not active |

The range of adjustment is dependant on the sensor range.

## Error displays

| Display | Cause | Possible remedy |
| :--- | :--- | :--- |
| rA.Lo | Lower range has been reached | Reduce limit, if need be |
| rA.Hi | Upper range limit has been reached | Increase limit, if need be |
| LOC | Parameter has been locked | Unlock, if need be |
| Er.Hi | Top range end has been exceeded, <br> sensor defect | Bottom range end has been exceeded, <br> sensor defect |
| Er.SY | System error | Check sensor and cable |
|  |  | Extinguish error signal by pressing the <br> "E"-key. <br> Check all parameters. <br> If the error signal continues please send <br> the instrument back for examination. |

## Installation Instructions

Make certain that the devices described here are used only for the intended purpose.
They are intended for installation in control panels.
The controller must be installed so that it is protected against impermissible humidity and severe contamination.
In addition, make sure that the permitted ambient temperature is not exceeded.

## The electrical connections must be made according to the relevant locally applicable regulations.

If using a thermocouple sensor, the compensation cables must be laid directly to the controller terminals. Transducers must be connected only in compliance with the programmed range.
Transducer cables and signal lines (e.g. logic or linear voltage outputs) must be laid physically separated from control lines and mains voltage supply cables (power cables).
To keep the CE-conformity it is nessesary, to use for sensor- and low voltage signal lines shielded cabels. Spatial separation between controller and inductive loads is recommended.
Interference from contactor coils must be suppressed by connecting adapted RC-combinations parallel to the coils.
Control circuits (e.g. for contactors) should not be connected to the mains power supply terminals of the controller.

## IMPORTANT:

Before operation, the unit must be configurated for its intended purpose
(e.g. sensor type and range, switching point/setpoint adjustment etc.). Please see „Configuration Level".
